OBJECTIVE

Third-year B.Tech student in Computer Science and AI seeking a data science and machine learning internship. Eager to apply hands-on skills in Python, SQL, machine learning, and NLP, built through projects like an e-commerce customer intelligence system and a deployed laptop recommendation app, to solve real-world problems while learning from industry mentors.

EDUCATION

B.Tech in Computer Science and Artificial Intelligence	2024 – 2028
Jaipur Engineering College and Research Center, Jaipur	CGPA: 8.78 / 10
Class XII (RBSE)	2022 – 2023
Bhagwati Senior Secondary School, Mahwa (Dausa)	Percentage: 94.20%
Class X (RBSE)	2020 – 2021
G.B. International Senior Secondary School, Mahwa (Dausa)	Percentage: 98.00%

SKILLS

Languages: Python, SQL, JavaScript

ML & Data Science: Machine Learning, NLP, Scikit-learn, Pandas, NumPy, Feature Engineering, Statistics, Data Analysis

Data Visualization: Power BI, Tableau, Streamlit, Matplotlib, Seaborn

Frontend: React.js, Redux, Bootstrap, Tailwind CSS, HTML5, CSS3

APIs: FastAPI, REST APIs

Database: MySQL

Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code, Netlify, Render

Soft Skills: Problem Solving, Teamwork, Communication, Adaptability

PROJECTS

E-commerce Review Intelligence (ERI)

Python, NLP, Scikit-learn, Pandas, LDA, Power BI, Streamlit

- Built an end-to-end e-commerce review intelligence system using the Olist dataset, covering review analysis, customer analytics and business insights.
- Preprocessed and cleaned customer review text, handling duplicate/conflicting reviews and preparing the data for downstream NLP analysis.
- Implemented sentiment analysis to classify reviews into positive, negative and neutral categories and analyzed sentiment distribution across customer feedback.
- Applied Latent Dirichlet Allocation (LDA) for topic modeling to discover major themes and issues within customer reviews.
- Performed customer segmentation using purchase behavior, review activity and customer-level features to identify distinct customer groups.
- Developed retention analysis to identify customer activity/inactivity patterns and support customer retention insights.
- Created a customer priority framework combining sentiment, topics and customer-level information to identify customers/issues requiring attention.
- Built interactive Streamlit and Power BI dashboards for sentiment, topic, segmentation and retention analysis.

Laptop Intelligence System (LIS)

[Live Demo](#)

Python, Selenium, Pandas, NumPy, Scikit-learn, FastAPI, React.js, Streamlit

- Built an end-to-end ML application that scraped 3,000+ laptop listings from MySmartPrice.com using Selenium, without relying on a pre-made dataset.
- Cleaned and transformed the scraped data using Pandas and NumPy, performing feature engineering to prepare it for machine learning.
- Built four core modules: Laptop Recommendation, Price Prediction, Category Classification, and Laptop Comparison.
- Designed a scoring-based recommendation engine that evaluates processor, RAM, storage, GPU and display against user requirements and ranks laptops by compatibility score instead of using fixed filters.
- Trained a Random Forest Regressor to predict laptop prices from engineered spec features.
- Implemented category classification (Budget, Business, Gaming, Premium) and a side-by-side laptop comparison module.
- Integrated the ML modules with FastAPI and developed interactive interfaces using React.js and Streamlit for product analysis, comparison and recommendations.

CERTIFICATIONS & ACHIEVEMENTS

- **Front-End Web Development with React** | Udemy (59.5 hours, July 2025)
- **Campus Ambassador, SPHINX'25 (Technical Fest, MNIT):** Ranked 2nd among student ambassadors from multiple colleges for outreach, participant engagement, and campus-level promotion.
- Secured 1st position in Class 10 and 1st position in Class 12.
- **Problem Solving:** Solved 100+ Data Structures and Algorithms problems on LeetCode.
